Dear Robert

Thank you for meeting on site with me last month and to discuss the possibility of the supply of forestry biomass to your proposed CHP plant at Bishops Castle.

We have now secured the material and new clones from Italy for the new nursery on your home farm.

We have over 100 joint venture sites with well managed poplar woods with large volumes of material available for biomass production. All of the sites are sustainable and environmentally friendly resources. We are already supplying material to other power stations and looking to expand our SRC production around the UK.

We would be happy to set up a longer term contract to provide material and to work with you planting new woodlands or SRC plantations with the aim to supply local renewable energy sources.

I hope this gives you the information you require, and will be in touch soon in regards to planting schemes on your farm and in the area.

Yours Sincerely

**William Jackson
(Forestry Manager)**

Subject: RE: planting trees and future co-operation

Dear Robert

Volumes of timber we would be able to supply to you on an annual basis would be around 6000 cubic metres with more coming available within 5 years.
We have over 30 plantations within 30 miles of your site all with a regular rotation of thinning.

In regards to Renewable Energy Growers I will take this further and update you with any news.
